

Burin Peninsula Rural Secretariat Region

Natural Population Change

The demographics of the Burin Peninsula region have changed significantly over the past 20 years. Total births declined from 325 in 1991 to 185 in 2005. At the same time, deaths remained fairly constant, with an average of roughly 200 per year. Thus, natural population change has declined from an annual increase of 145 in 1991 to a slight decrease of 15 in 2005.

Out-Migration

Net-migration has usually been negative in the Burin Peninsula region. In 1991, annual net out-migration was roughly 270 persons. Net out-migration peaked at around 870 in 1998 exacerbated by the collapse of the fishery and changes to the EI program along with other factors. Out-migration slowed over the next few years hitting a low of around 400 in 2003, however, it increased again in recent years reaching approximately 490 in 2005. Recent challenges in the

fishery and manufacturing industries, and the increased number of attractive high paying jobs in other provinces, particularly Alberta, have provided strong incentives for people to migrate.

Population Today

As a result of the combination of falling natural population change and high levels of net out-migration—particularly amongst youth—the population of the region has declined from 29,900 in 1986 to around 21,300 in 2007.

Furthermore, the population aged rapidly, with the region's median age increasing from around 29 years in the early 1990s to about 42 years today.

The geographic distribution of the population has changed; generally, the populations of smaller communities in the region have declined at a faster rate than that of larger towns (see table).

Interpreting Population Pyramids

Population pyramids show the make-up of the population in terms of the number of males and females grouped by age. Pyramids that are wide at the bottom and small at the top reflect a younger population while those smaller at the bottom and larger at the top reflect an older population. The lighter bars above represent the “baby boomers” (i.e., those born between 1947 and 1966).

Changes in Selected Demographic Groups

School Age Population

Out-migration and declining births have reduced the size of this region's 5 to 19 age group from 9,400 in 1986 to 3,700 in 2007.

School Age Population (5-19 Years)

Labour Market Entrants and Leavers

The number of people preparing to exit the labour market (ages 55-64) now exceeds the number about to enter the labour market (ages 15-24) in this region. In 1986, potential new entrants exceeded potential leavers by 4,100. In 2007, the number of potential labour market leavers exceeded potential new entrants by 950.

Potential Labour Market Entrants and Leavers

Core Labour Force Population

As a result of aging and out-migration, the core labour force population (ages 15-64) declined from 19,000 in 1986 to 15,200 in 2007. This group is also aging. In 1986, 78.7% of this group were ages 15-44. Today, 52.1% are between the ages of 15 and 44 and 47.9% are 45 or older.

Seniors

Despite the drop in total population in this region over the past two decades, aging and rising life expectancy have increased the seniors population from 2,400 in 1986 to almost 2,900 in 2007.
